

Workshop AGENDA

Wednesday, April 10

9.00am - 12.00pm

Introductions & Updates

CEU Session

1.00pm-5.00pm

“Microbial Wastewater Solutions” *Enviroway* 0.3 CEUs

Overcoming challenges is a daily task for most wastewater operators. This presentation will discuss the use of microbes to prevent and solve common problems associated with lift stations, drain lines, lagoons and wastewater treatment plants. Issues with blockages, sludge rings, mounding, reduced capacity, foul odours and foaming will be discussed, along with tips on preventative as opposed to reactive maintenance. Examples and case studies will be presented.

Thursday, April 11

CEU Session

9.00am-5.00pm

“Lagoon Operation & Maintenance Workshop” *ATAP* 0.6 CEUs

This workshop covers in detail the aquatic environment of a wastewater lagoon and the respective characteristics of aerobic, anaerobic and facultative ponds. Also covered are the theory and function of lagoon operation, lagoon design, development of proper lagoon O&M programs, as well as review of the provincial environmental regulations. Calculations related to loading and discharge are demonstrated.

New North
